

PRESS RELEASE

Würth Industrie Service will be presenting at SMM 2024 – Supply solutions for the maritime industry

Bad Mergentheim/Main-Tauber-Kreis. Be it shipbuilding, marine technology or even shipyards: As the leading international maritime trade fair, the SMM will bring together important industry leaders from all the sectors of the value chain from 3rd to 6th September 2024 and will set new standards in the fields of artificial intelligence and green shipping. Representatives from the industry, government, marine sector and science will highlight trends and innovations across the industry. Even Würth Industrie Service GmbH & Co. KG is on site in Hamburg and will be presenting the holistic solutions for production and operating materials at the booth B7.334 in the hall B7.

As a highly specialised industrial sector, the maritime industry has wide-ranging and at the same time highly complex requirements, especially when it comes to production, logistics, assembly and maintenance. Aside from durable, certified and especially corrosion-resistant products with shipbuilding approval, which must withstand a wide range of weather conditions and the constant application of a force with the highest level of durability and resilience, reliable supply solutions are also the need of the industry. In order to optimise the value chain consistently, it is important to ensure automated material supply and streamline production processes while also reducing the process costs significantly. Würth Industrie Service demonstrates how this can be achieved with its tailor-made procurement and logistics concepts, which are being used by around 20,000 industrial customers for optimum C-Parts Management in their market, in their industry and in every area of production.

Smart solutions for all-round supply

The supply solutions of Würth Industrie Service provide the basis for manufacturing, materials management, maintenance and also for the assembly workstation of the future. Manual orders, coordination of countless suppliers and deliveries of goods, unmanageable invoice verifications as well as long walking routes in production are now things of the past. Instead, reordering is mapped automatically, inventories are managed in a lean manner, unexpected fluctuations in requirements are recognised early on, costs and procurement efforts are reduced, and at the same time, efficiency and productivity is achieved. At the joint trade fair booth of the companies Würth Industrie Service and Adolf Würth

GmbH & Co. KG at this year's SMM in Hamburg, the visitors will get an overview of how maximum process and supply security can be achieved. From RFID Kanban for the fully automated replenishment of small production parts, ORSY[®]mat storage and vending machines for auxiliary and operating materials, to innovative workplace supply. Here, the company will be presenting the perfect interplay of intelligent systems. For example, the iTERMINAL for complete digitalisation of the Kanban rack, which optimises the processes like picking and searching in collaboration with iDISPLAY – a digital rack label that displays all the information about the items including filling quantity, availability, storage location as well as upcoming refills directly at the place of use. Even iSCALE, the sensor-controlled scale that is directly connected to the Kanban bin and reports the requirements of production materials and other small parts based on weight, stands out as an innovative system for self-sufficient, logistical storage management for C-Parts. In addition to the latest innovations for holistic C-Parts management, the trade fair will also offer further product highlights in the areas of special and drawing parts, petrochemicals and pressure vessel construction – PED, ADW, ASME – as well as occupational safety. The C-Parts expert also ensures optimised workplace ergonomics with the help of its wide range of exoskeletons. Regardless of whether it is for the knee, arm, wrist or back, use of external support and assistance systems offers a boost in ergonomics for more comfortable working. All these solutions will be available for the visitors to understand, experience and explore.

With more than 10 years of industry expertise in the marine industry and the membership of the German Shipbuilding and Ocean Industries Association (VSM), Würth Industrie Service knows precisely what is important. Thanks to the combined expertise in system, product and service, the company has its sights firmly set on the holistic factory and assembly requirements of its customers and thus offers everything from one single source. And not only customised, but also industry-specific. Support is offered from the very beginning at every step of the process and development – that is the understanding of a holistic partnership for Würth Industrie Service – even in the maritime industry. With a dedicated competence team CPS[®]MARITIM, experienced experts who are well-versed with the market, the industry and the requirements of the respective customers, are by the side of the customers – for all production sites worldwide directly on site.

Würth Industrie Service GmbH & Co. KG will be at the SMM from 3rd to 6th September 2024 in Hamburg at booth B7.334 in hall B7.

Brief profile of Würth Industrie Service GmbH & Co. KG

Within the Würth Group, Würth Industrie Service GmbH & Co. KG is responsible for supplying to the industrial sector. Since its foundation in the year 1999, the company is located at the Würth Industrial Park in Bad Mergentheim, Germany with over 1,800 employees.

As a one-stop C-Parts provider, the company offers its customers a specialised product range with over 1,400,000 items: from screws and tools to connection and fastening technology, technical chemicals as well as occupational safety solutions. Aside from the extensive standard product range, the strength of the company lies in its customer-specific, logistical and dispositive supply and service concepts as well as special parts. Under the service brand "CPS® - C-Product Service", the company offers modular solutions customised as per the customer's requirements. These consumption-based and demand-based systems streamline the processes for purchase, logistics and quality assurance while enabling the procurement of small parts in a cost-optimised manner. Logistic and dispositive services such as shelving systems that use scanners or a just-in-time supply using Kanban bin systems play a significant role in increasing productivity.
